

Project Engineer R&D

Be a part of the future of healthcare- Not only a career but the opportunity to make a difference by “CREATING VALUE BY HELPING PEOPLE”.

If you are interested in transforming the healthcare sector worldwide, Q3 Medical will fulfil your needs for both personal and professional growth. We are a growth stage commercial company which is leading innovations in biodegradable implants and micro invasive technology for the Interventional Radiology, Gastro Intestinal, and open Surgical procedures which will change the face of healthcare, offering better clinical outcomes and reducing the overall cost of care.

R&D at Q3 Medical, (Qualimed) Germany is looking for a motivated project engineer to help us create new whilst enhancing our current technology across our biodegradable, micro invasive and core peripheral product lines. We are on a mission to provide better clinical outcomes for patients and reducing the overall cost of care for healthcare systems. This mission begins with R&D and the revolutionary technology we design and develop in which our project engineers play a crucial role in bringing these products to life and keeping innovation at the core of what we do.

We are looking for a self-motivated individual with a positive mindset who will apply advanced technical principles, theories, and concepts in working on complex technical problems across our own 12 step/5 stage methodology. The ideal candidate will be able to collaborate with other team members as well as cross functional departments but also be highly focussed on executing their own work. This person should be focussed on growth and learning to be curious about future opportunity and personal development.

Location Winsen, Germany – flexibility with home office.

What is the Day Job

- Work across the design and development of projects from concept to market launch as per Qualimed's 12 step/5 stage methodology.
- Support Project Manager in planning, conducting and documenting tech projects including time lines and budget.
- Develop product concepts and conduct testing, evaluates results using appropriate statistical analysis tools, support test lab in case of specialized test.
- Ensure that project documentation is compliant to the Qualimed design control process.
- Work collaboratively with product development teams as well as with cross-functional team members to help bring products to market.
- Execute product and process development as well as product transfer.
- Write and execute protocols, reports, work instructions and drawings / specification.
- Support complain investigations including conducting root cause analysis.

What You Need

- Minimum Bachelor of Science in Mechanical/Biomedical Engineering or equivalent.
- Strong understanding of metals/polymers and their processing techniques.
- Ideally 1+ years of industry experience.
- Detail-oriented, well-organized and proactive towards any given task.
- Ability to work in a fast-moving, milestone-oriented and multi-national working environment.

What We Would Like

- Team player with great communication skills.
- Curious and motivated for self-development, both technically and personally.
- Process Improvement Oriented.
- Result and execution focussed.
- Analytical skills with evidence based approach.

At Q3 we are dedicated to building an inclusive, diverse and authentic workplace so if you think you have the relevant experience, skills and knowledge but it doesn't line up with the description we would love to hear from you regardless. Please do not be shy- You might just be the candidate we are looking for. Q3 Medical is an equal opportunity employer.

Life at Q3 Medical

Whilst our company was founded 25 years ago, it is still in its infancy. We have challenged ourselves to become a global leader in creating and producing medical technology that truly is **“CREATING VALUE BY HELPING PEOPLE”**.

We have created an incredible sustainable culture to guide us into the future where we continue to value innovation and growth including the personal and professional our people as well. We are dedicated and loyal to our mission and each other to insure we act and feel part of the Q3 Family. Our leaders are inspiring and always look to lead individuals, teams and the company with empathy which is the foundation for our success. We encourage our employees to be there best and embrace their diversity and everything they have to offer to develop them to help us be life changing as well.

Our team is a diverse set of incredible people who bring their individual experiences, backgrounds and ideas to life every day. We believe the only way to fulfil our mission is to attract forward focused and talented people to be a part of our collective journey. We are constantly looking for well-rounded doers around the world to join our diverse team represented by almost 30 different countries who not only share what we have created in our foundation but also have the capability to develop it future through innovation, loyalty and empathy.

The more people we help whether that be patients, doctors, customers or employees the more value we create. This is our commitment to our vision of **“CREATING VALUE BY HELPING PEOPLE”**.
